

The Valentina Project

www.valentina-project.org

Released under GNU GPL v3

Valentina is a new cross-platform patternmaking program which allows designers to create and model patterns of clothing.

Patternmakers and designers can utilize traditional precision patternmaking methods to create digital patterns.

Patterns can be created either by using standard sizing measurements or by using an individual's set of measurements.

Developed with Qt5 C++ UI framework
Downloads available for Mac, Linux, Windows

The Valentina Project

www.valentina-project.org

Released under GNU GPL v3

Milestones reached since 09/2013

GUI Tools

Formula generation of pattern points

Body Measurement implementation for standard sizes and custom sizes

Body Measurement file format - XML/XSD

Export pattern file formats – .pdf, .ps, .eps, .svg, .png

Translations – Ukrainian, Russian, Czech, German, English, Hebrew

Code Documentation – Doxygen

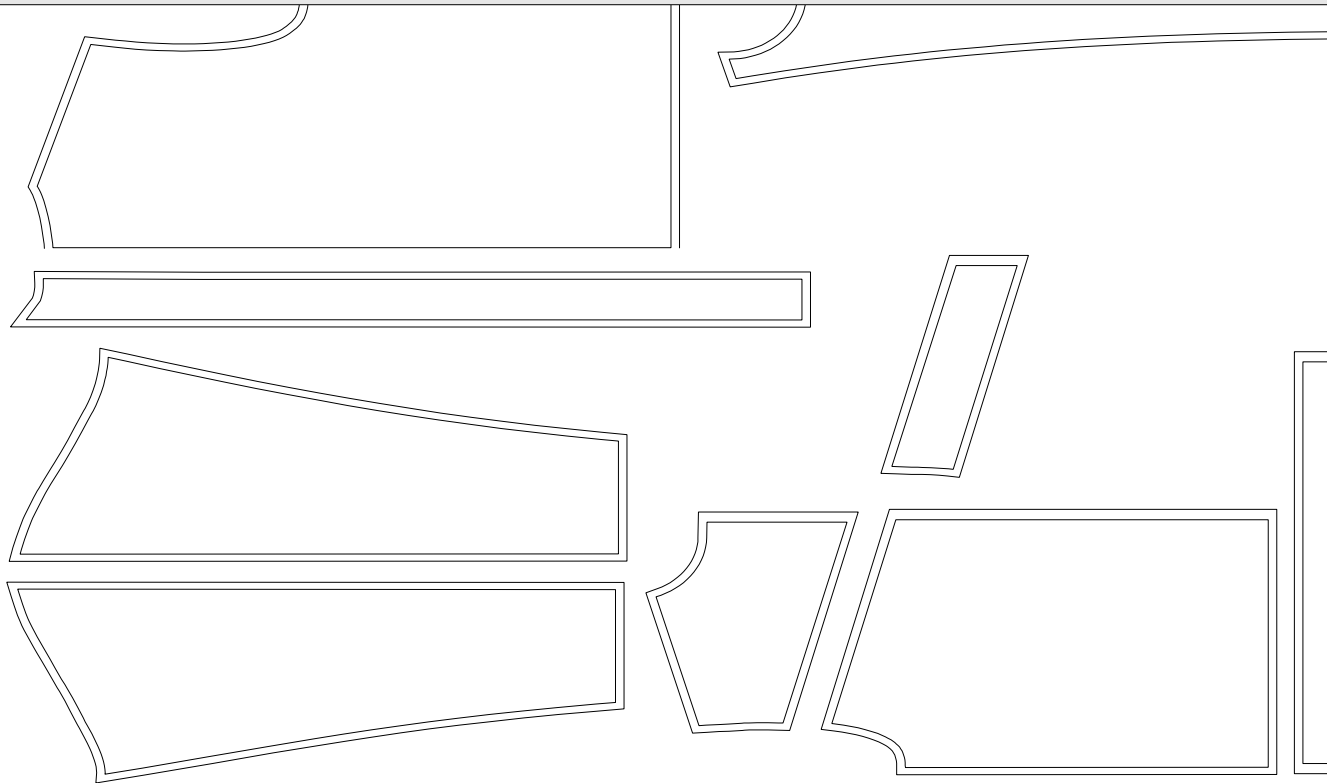

Google Summer of Code 2014 via FOSSAsia sponsorship

The Valentina Project

www.valentina-project.org

Released under GNU GPL v3

Example of Jacket pattern produced by Valentina software

The Valentina Project

www.valentina-project.org

Released under GNU GPL v3

Founder

Roman Telezhinskyi

Coding

Roman Telezhinskyi, Christine Neupert, Sabine Schmaltz,
Kunda, Steve Conklin, Bernt Hullen

Translations

Christine Neupert, Pavel Fric, Kunda

Testing

Christine Neupert, Lisabeth Lueninghoener, Esther Melander, Kunda

Community Organizers

Kunda, Susan Spencer

GSoC mentors

Mario Behling, Christine Neupert, Susan Spencer
